"WisdomCAD" link: <https://ftp.setterholm.com/WorldPeace/Math/WisdomCAD.pdf>

To a first approximation, recorded human world history can be summarized in one sentence:

**"Human leaders have focused immense wealth & power on creating & profiting from chaos".**

America's unwise new leaders have finished running their 2024 election victory lap & are now intensely focusing on screwing people worldwide for fun and profit. Their like-minded peers in other countries are rejoicing. Wars & stock market crashes are features of the process, not its problems. Until now: people without wealth & power have been defenseless victims of the cruel profiteering; that will eventually change.

"Wisdom" now has a quantified definition. As a result, Computer Aided Design ("CAD") theorists and programmers can create & evolve applications ("apps") which accurately predict wise solutions to social problems within specific domains of consideration. Shared, stable, powerful, affordable programming, computing & visualizing environments will morph wisdom into a commodity.

When will the professors of the world's universities embrace "wisdom"? Let's patiently watch for it.

It is possible that WisdomCAD will eventually be promoted by surviving rich & powerful people. My unheeded warning to them in 2016 was the two-page paper:

<https://ftp.setterholm.com/WorldPeace/TrustOrBust.pdf>

In 2016 none of us knew how wisdom should be defined; now we do. CAD offered no resistance to social misrepresentation; now it can. Irresponsible AI programmers hadn't yet mastered bullshit; now they have shredded the concept of public "integrity". In 2025 misrepresentation zealots are nurtured; but autonomous lethality in many forms is also beginning to haunt battlefields.

Has anyone begun writing the app that will govern better than our current President? My advice in 2008 was link: <https://ftp.setterholm.com/Philosophy/DecisionTransparency.pdf>

Lurching in a novel direction after each Presidential Election is unwise & unnecessary.

<https://ftp.setterholm.com/WorldPeace/Math/Rubik/Min-Steps.pdf> reveals a radically new, extremely efficient, fully-cooperative branch of game theory.
